Important Information - Please Read Before Using This Policy

The following coverage policy applies to health benefit plans administered by PHP and may not be covered by all PHP plans. Please refer to the member's benefit document for specific coverage information. If there is a difference between this general information and the member's benefit document, the member's benefit document will be used to determine coverage. For example, a member's benefit document may contain a specific exclusion related to a topic addressed in a coverage policy.

Coverage determinations for individual requests require consideration of:

- The terms of the applicable benefit document in effect on the date of service.
- Any applicable laws and regulations.
- Any relevant collateral source materials including coverage policies.
- The specific facts of the particular situation.

Contact PHP Customer Service to discuss plan benefits more specifically.

1.0 Policy:

Health Plan covers therapeutic shoes (depth or custom-molded), inlays provided with the shoe and shoe inserts for members with a diagnosis of diabetes.

Please refer to the member's benefit plan coverage guidelines for therapeutic shoes and inserts for diabetic patients. Benefit plans may include a maximum allowable benefit.

For all non-network covered services to be paid at the network benefit level except for emergency/urgent services, prior approval is required.

2.0 Background:

Therapeutic footwear is commonly used in clinical practice for preventing and healing of foot ulcers in persons with diabetes. Diabetes is a chronic illness in which the body does not properly produce or use insulin. Foot ulcerations, infections, peripheral neuropathy, and lower extremity amputations are common consequences of diabetes. Effective management (including therapeutic shoes, inserts or modifications) of these factors may assist in the prevention of or delay of adverse outcomes.

- A. Therapeutic shoes and inlays are considered medically necessary when an individual is diagnosed with diabetes mellitus. The individual must have:
1. Foot deformity (e.g., hammer toe deformity, mallet toe deformity, Charcot arthropathy) or previous amputation of foot or part of foot.
 2. Been evaluated by a provider with appropriate expertise in patient's condition and has recommended therapeutic diabetic shoe(s).
 3. Been fitted and furnished for therapeutic shoes and inserts by a podiatrist or other qualified individual such as a pedorthist, orthotist or prosthetist. The certifying physician may not furnish the diabetic shoes unless the certifying physician is the only qualified individual in the area. It is left to the discretion of the Health Plan to determine the meaning of "in the area."
- B. Separate Inserts may be covered and dispensed independently of therapeutic shoes if the supplier of the shoes verifies in writing that the patient has appropriate footwear into which the

insert can be placed. This footwear must meet the definitions found above for depth shoes and custom-molded shoes.

3.0 Clinical Determination Guidelines:

None.

None.

6.0 Terms & Definitions:

Custom-molded shoes:

1. Are constructed over a positive model of the patient's foot;
2. Are made from leather or other suitable material of equal quality;
3. Have removable inserts that can be altered or replaced as the patient's condition warrants; and
4. Have some form of shoe closure.
5. Have a full length, heel-to-toe filler that, when removed, provides a minimum of 3/16 inch of additional depth used to accommodate custom-molded or customized inserts;
6. Are made from leather or other suitable material of equal quality;
7. Have some form of shoe closure; and
8. Are available in full and half sizes with a minimum of three widths so that the sole is graded to the size and width of the upper portions of the shoes according to the American standard last sizing schedule or its equivalent. (The American standard last sizing schedule is the numerical shoe sizing system used for shoes sold in the United States.)

Inserts. Total contact, multiple density, removable inlays that are directly molded to the patient's foot or a model of the patient's foot and that are made of a suitable material with regard to the patient's condition.
